Control Tower Analytics Intern

Duration: 6 months
Location: Bengaluru

Role Overview

The intern will work on Duroflex's Control Tower program, helping identify fulfilment risks, analyze delivery breaches and convert operational data into actionable insights.

This is a hands-on role suited for someone who enjoys working with data and solving business problems rather than only preparing reports.

Key Responsibilities

- Analyze order fulfilment, delivery breaches and operational exceptions.
- Identify trends, recurring bottlenecks and root causes across cities, products and fulfilment stages.
- Prepare daily/weekly management views and support deeper analytical reviews.
- Work extensively with Excel, Pivot Tables and large operational datasets.
- Support automation and improvement of Control Tower reporting.
- Translate analysis into clear action points for cross-functional teams.

What We Are Looking For

- Strong analytical and data-interpretation skills.
- Good working knowledge of **Excel; Pivot Table proficiency is mandatory**.
- Comfort working with large datasets and identifying patterns.
- Structured problem-solving ability and attention to detail.
- Basic knowledge of SQL / Power BI / Python is an advantage, but not mandatory.

What You Will Get

- Exposure to a high-visibility, cross-functional business transformation program.
- Hands-on experience in supply chain, operations, analytics and exception management.
- Opportunity to solve live business problems with measurable customer and operational impact.
