Full-Stack Developer

Web • Python • AI Automation

Company	DemandNXT Business Services Pvt. Ltd.
Location	HSR Layout, Sector 6, Bangalore
Experience	1–3 Years | Exceptional freshers with strong projects may apply
Work Mode	Work From Office
Shift	Day Shift | Monday–Alternate Saturdays
Education	BE / BTech / MCA / BCA / MTech
Compensation	Starting from ₹4 LPA, based on skills and experience. Fast-track performance review after 6 months with significant growth potential.

About the Role

DemandNXT is looking for a highly capable and curious Full-Stack Developer who can work across web development, WordPress, Python, and AI-powered applications and workflows.

This is not a role where you will work on only one technology. You may be building a WordPress website, developing a Python/API-based application, integrating an AI workflow, connecting a CRM or third-party API, improving website performance, or experimenting with a new AI development framework.

We are particularly interested in developers who are excellent at using AI to build faster, solve problems better, and turn ideas into working applications.

What You'll Work On

- Build and maintain modern websites and web applications.
- Develop and customize WordPress websites, themes, and plugins.
- Build backend applications using Python, Flask, FastAPI, or Django.
- Develop and integrate REST APIs and third-party services.
- Work with HTML, CSS, JavaScript, and responsive web technologies.
- Work with PostgreSQL / MySQL and other databases.
- Integrate websites with CRM, marketing, and third-party platforms.
- Build applications and workflows using AI / LLM APIs.
- Create AI-powered automation workflows and agents.
- Use AI coding tools extensively for development, debugging, testing, research, and optimization.
- Improve website speed, performance, Core Web Vitals, and technical SEO.
- Deploy and maintain applications on cloud / server environments.
- Experiment with new AI tools, frameworks, and development approaches.
- Work closely with Marketing, Product, and Technology teams.

Required Skills

Must Have	Good to Have
Strong Python programming fundamentals	React / Next.js or another frontend framework
WordPress development experience	n8n / Make / Zapier or similar automation tools
HTML5, CSS3 & JavaScript	OpenAI / Anthropic / Gemini or other LLM APIs
Understanding of PHP & WordPress architecture	AI agents, tool/function calling & structured outputs
Flask / FastAPI / Django	RAG / embeddings / vector databases
REST APIs & third-party API integration	Elasticsearch
PostgreSQL / MySQL	UI/UX & Figma
Git / GitHub & debugging	Technical SEO / AEO
Responsive web development	AWS / Azure / GCP
Strong AI-assisted coding / development skills	Linux / server administration
Ability to learn new technologies quickly	Docker / CI/CD

AI-Assisted Development & Automation

We are specifically looking for developers who actively use AI as part of their development workflow—not simply candidates who have experimented with ChatGPT.

You should be comfortable using modern AI coding tools to accelerate development, debug applications, refactor code, generate tests, research solutions, and build production-ready applications. You will also work on AI-powered workflows involving LLM APIs, structured prompts, API integrations, automation tools, and AI agents.

Examples include ChatGPT, Claude, GitHub Copilot, Cursor, or equivalent tools. Experience with any one specific product is not mandatory.

Who we're looking for

Someone more than just a coder — a problem solver. You should be able to understand a business requirement, research possible solutions, use AI effectively, choose the right technology, build the application, troubleshoot problems, and continuously improve what you have built.

We value demonstrated ability more than years of experience. Candidates with strong GitHub projects, live websites, AI applications, internships, or personal projects are encouraged to apply.

Why Join DemandNXT?

- Work on real AI + Web + Automation projects.
- Gain hands-on exposure across Python, WordPress, APIs, UI/UX, SEO/AEO, and modern AI technologies.
- Build real business applications rather than isolated practice projects.
- Work cross-functionally and take ownership of your ideas.
- Experiment with new technologies and AI-driven development approaches.
- Performance-based career growth and creative freedom.

Selection Process

Shortlisted candidates will complete a practical, hands-on technical assessment where the use of AI tools is encouraged.

The assessment will focus on how well you understand a requirement, select an approach, use AI effectively, build a working solution, troubleshoot issues, and explain the code and decisions behind your work.
